

NEVISCURA ROOM SENSOR - FALL SENSOR TECHNOLOGY OF THE FUTURE

The room sensor of nevisCura is an innovative sensor system used for fall detection and prevention in outpatient and inpatient care facilities. Once installed all around at baseboard level, it offers maximum protection for residents and noticeably relieves caregivers.

Fall detection

If a person falls, the system reports the fall in real time.

Movement Profile

Long-term analyses provide information about the activity in the room.

Night light

The night light provides orientation when a person gets up at night.

Why the room sensor?

- ✓ No wearables
- ✓ Unobtrusive and discreet
- ✓ Preservation of privacy

We are thrilled what such an inconspicuous sensor band can do. How something innovative is created from familiar technology is what the care industry is waiting for.
