

nevisCura Bed Sensor at Pflegewohnhaus Lannach of Caritas Diocese Graz-Seckau

Caritas

Facility:

- 30 beds
- Alarm connection to Zettler Medical 800 nurse call system by Johnson Controls

Result:

- No unnecessary false alarms, so staff do not have to respond to the bell unnecessarily.

Why should the bed sensor be used?

An inexpensive solution was sought that would take up less space and improve fall prevention.

How does the bed sensor support everyday work?

The nevisCura bed sensor is primarily used for residents with dementia who are at risk of falling and are unable to operate the call bell.

Advantages

- > Fewer false alarms
- > Nothing in front of the bed anymore, so you can't forget to put it in place before going to bed
- > More affordable than mats
