

## nevisCura Bed Sensor at Seniorenhilfe SMMP Haus Maria

### Facility:

- 102 beds
- Alarm connection to Cereda Winkel 6000 nurse call system

### Result:

- Faster response from nursing staff
- Easy to use for nursing staff

### Why should the bed sensor be used?

For individuals with cognitive impairments, fall prevention counseling is not feasible. They are unable to assess their risk of falling, attempt to stand up, and end up falling. We had hoped to be on hand promptly to provide fall prevention support to the person in our care who is bedridden, in order to prevent or reduce falls.

### How does the bed sensor support everyday work?

The bed sensor triggers the call system directly. This allows staff to see immediately on the call display where the call originated and respond accordingly. In addition, the bed sensor can be easily moved to other nursing beds if a patient's needs change. The bed sensor is highly responsive, enabling staff to come to the patient's aid promptly.

### Advantages

- > Easy to install and remove
- > Space-saving
- > Easy for staff to use
- > The bed sensor is easy to use.
