

## nevisCura Bed Sensor at Seniorenzentrum St. Martin, BRK Kreisverband Ostallgäu

### Facility:

- 82 beds
- Alarm Connection to Varolux Varocom 21

### Result:

- Only positive experiences
- The nursing staff are very satisfied

### Why should the bed sensor be used?

We had been looking for an alternative to fall mats for some time, as fall mats cost just as much money but break quickly. Our sister facility St. Michael informed us about the nevisCura bed sensor and we followed up on it.

### How does the bed sensor support everyday work?

The nevisCura bed sensor is particularly helpful for residents who are at high risk of falling and for residents who are no longer cognitively able to ring the bell when they need help.

### Advantages

- > The durability is better than that of the fall mats
- > Residents no longer push fall mats under the bed
