

nevisCura Bed Sensor at Specht Seniorenresidenz Mirabilis

Facility:

- 97 beds
- Alarm connection to Hospicall nurse call system

Result:

- The number of falls from beds has decreased significantly
- This reduces the number of hospital stays and the administrative burden following falls
- Positive feedback from nursing staff

Why should the bed sensor be used?

This is a very new facility that only opened last year. The management was looking for a practical fall prevention solution. During the trial phase, the nevisCura bed sensor was tested at leisure. The bed sensor was primarily intended for use with restless residents with cognitive impairments.

How does the bed sensor support everyday work?

Falls from bed or after getting out of bed are prevented more frequently. It is very easy to use. The nursing team welcomed the change and quickly got used to it.

Advantages

- > Easy to apply, easy to use
- > Quickly accepted by nursing staff
